

Cyber Security Service
24/7
CSS-RS

What

RightSource is a USA based company that sets up Nearshore IT teams to provide the most cost-effective options for our clients

A unique RightSource hybrid model for Security Operation Center (SOC) services

- Workload Security (UPS, Desktops, Terminals)
- Network Security (Switches, Routers)
- Application Security (Servers)
- Container Security Virtual (Servers)
- File Storage Security (Storage)
- Cloud Infrastructure Security

- We offer Basic and intermediate monitoring
 - We monitor suspicious activity and we manage Cybersecurity minor incidents
 - We create and manage security rules and filters
- Dedicated custom teams for monitoring and administration
 - SNMP
 - Extreme
 - Cisco
 - CheckPoint
- Manage your own people but with nearshore/offshore benefits

How

RightSource has invested on the latest SOC infrastructure; we can monitor your sites 24/7

The RightSource team sets up cybersecurity software and infrastructure for our clients, we have the experience and knowledge to run a 24/7 nearshore SOC

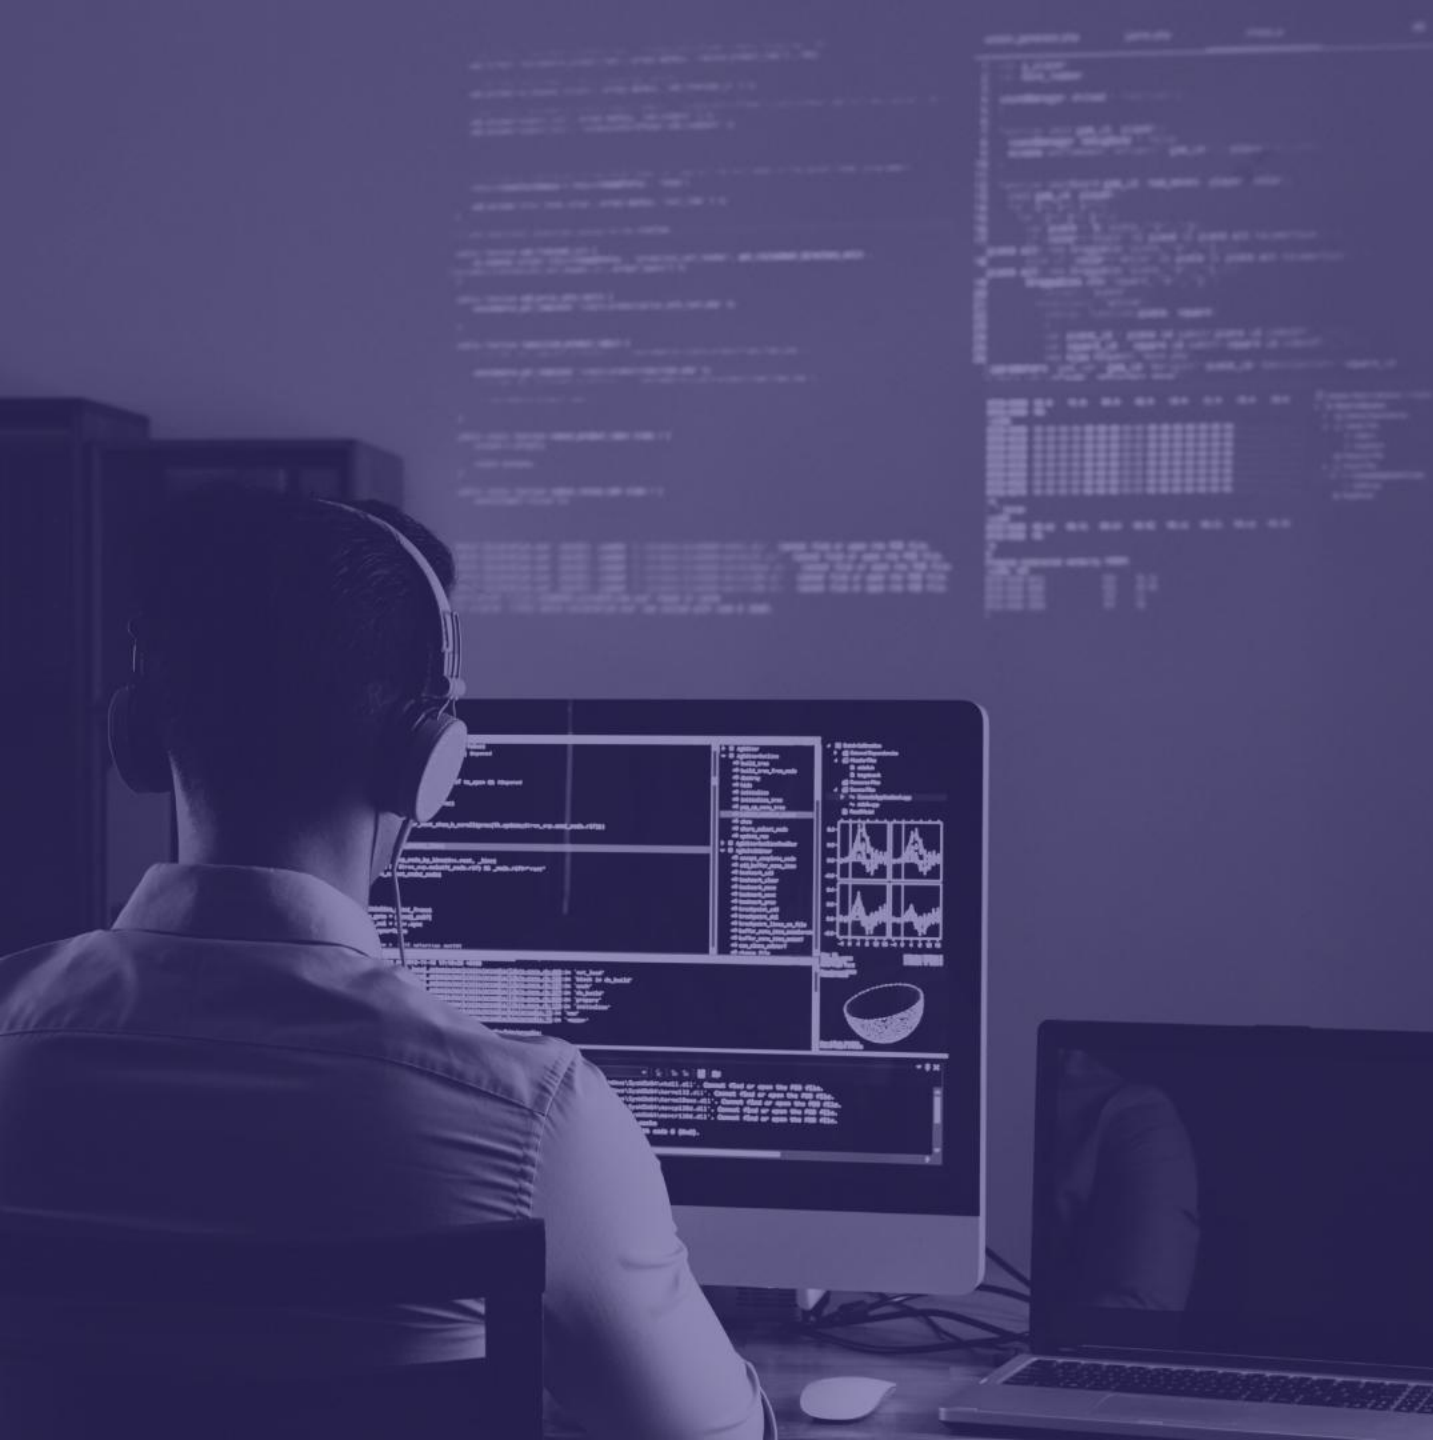

Applying a deep analysis in the security of business operations, starting from an initial point of security 0 risks

The best way to be secure is to outsource this function. Let us keep you safe while you focus on your core business. Leave your security to us.

Who

Government, Big companies and People are in risk every day. They do NOT have time to be the guardian of their doors.

Today at your company do you watch the entrance yourself, or do you have a dedicated internal role or security company on retainer for this?

Nearshoring is the best, most cost-effective option for you.

Why

The threats all around the world have been going up, the Covid19 pandemic has increased the use of home networks, while cyber crime has become an even greater threat.

Private and Corporate information has become the currency for Hackers to use for ransom.
